# Sage Business Cloud Accounting

Ready for Making Tax Digital for VAT

Spring 2019

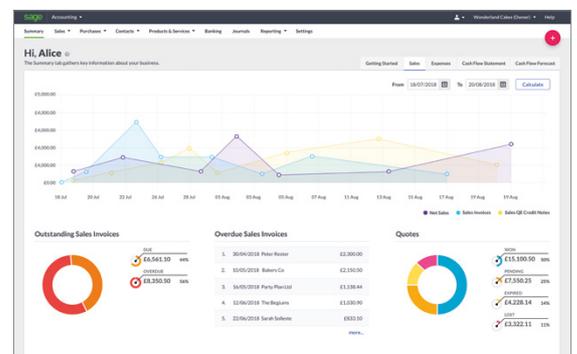

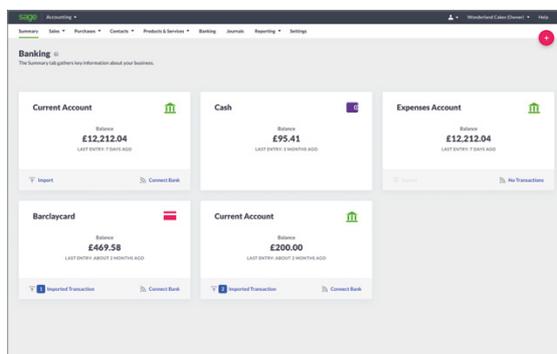

Sage Business Cloud Accounting is perfect for start-ups and small businesses. It's simple to use yet powerful accounting technology that's secure in the cloud and connects you and your business with your accountant, wherever you are and on any device.

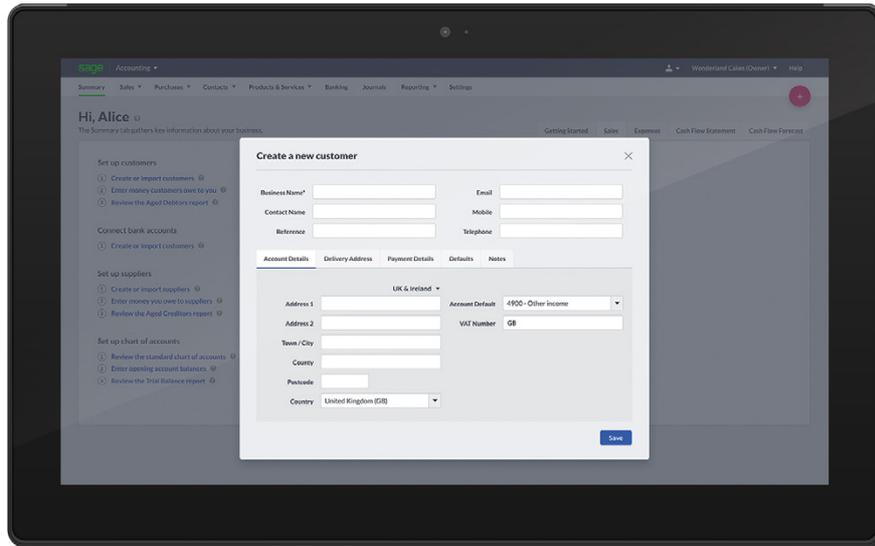

Accounting is packed with innovative features to help your business succeed, including automated bank feeds, a mobile app for business on the go, and is ready for Making Tax Digital and GDPR.

Accounting integrates with Payroll and a wide range of third-party applications through our Sage Marketplace – including powerful expense

and receipt capture to cut down on admin, and seamless payments integration with Stripe to help you avoid those awkward conversations chasing late payments. You can add these as and when you need them to extend the power of Accounting and suit the needs of your business.

## Sage Business Cloud Accounting enables you to manage your business finances whenever and wherever you want. And with a package to suit your needs, you're ready for Making Tax Digital.

### Manage your finances wherever you are

Access powerful features on your desktop or tablet, whenever you need them. With the Sage Accounting Mobile App, you can also add expenses, send quotes and see when your invoices have been paid.

Pegg, our smart digital assistant, will help you manage business finances on the go. Find out more about Pegg at [sage.com/en-gb/products/pegg/](https://sage.com/en-gb/products/pegg/)

### Collaborate more effectively

With Accounting, you and your accountant both have access to the same up-to-date information and can log in at the same time.

This enables real-time insights and advice on your business finances from your accountant.

### Enjoy software that's built around your business

Working alongside your accountant you can set up custom user roles and access to the tools that you need in the software – you're always in control. It's also easy to add more users as your business grows.

### Access a real-time view of your business finances

Seamlessly connect Accounting to your online bank account, saving you valuable time by enabling you to effortlessly import transactions without the need to re-key data and manually reconcile.

### Get support when you need it

Help is always at hand, with support via our online help centre, online chat, and over the phone.

### Remain compliant with automatic updates

Be it Making Tax Digital, GDPR or forthcoming legislation, Sage is focused on ensuring you're 100% compliant. Our team of experts have you covered.

### Sage Marketplace

Easily connect to an ecosystem of third party applications to tailor Accounting to your business needs.

## Sage Marketplace integration

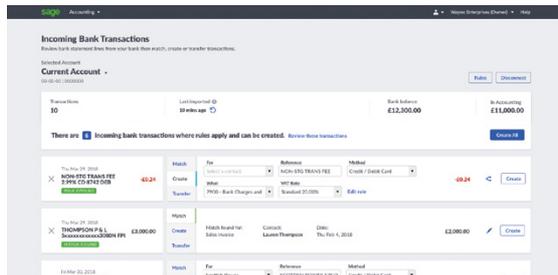

## Connect your bank — Onboarding Flow

We've enabled a brand new onboarding journey for connecting to both direct and indirect bank feeds, so now it's even easier to get connected. This enables you to automate data entry, easily sort and code transactions and skip the manual process, reducing time spent on data input by up to 80%!

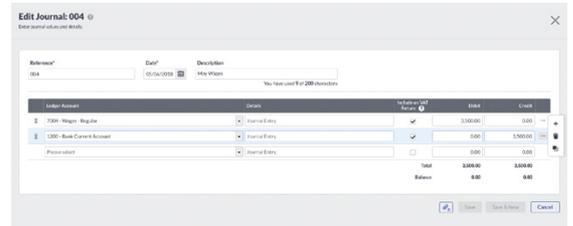

## Create all — Bank Rules

If you've connected one or more bank feeds, then you'll now also have access to Bank Rules, a time-saving way to create regular bank statement lines for items you haven't yet created in Accounting. Rules can be created, edited, prioritised and then instantly applied to transactions in bulk in the bank feed.

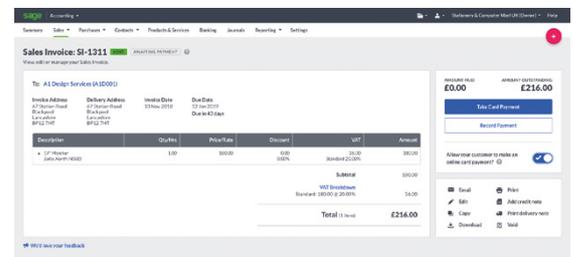

## Journals

The ability to work with Journals is important for every business. We've improved how these can be created, viewed, edited, voided and reversed. This will be music to your accountant's ears!

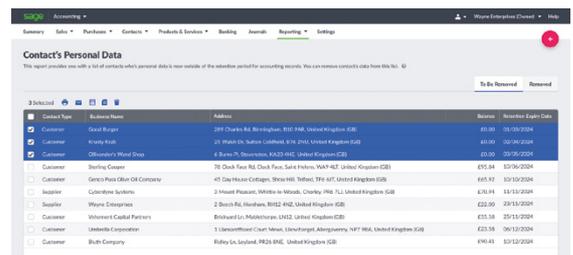

## Stripe Payments

If you've already integrated with Stripe to automate invoice payments, you may have noticed some fantastic changes. We've added the capability for you to choose when a customer can make an online payment on a per invoice basis with the addition of a simple toggle. We've also enabled Accounting to understand and process a payout that contains transactions from unknown sources. And you get visibility of your sales invoices, sales credit notes, estimates and quotes. Created, sent, viewed or paid – you'll know where it's up to and helping you to get paid.

## GDPR Report

You'll know that Accounting has been GDPR-ready since 2018, but we've now added new reports for you. For example, get a list of contacts that meet all the requirements of data retention, or show contacts that have already been removed.

# Drive your business forward with Sage Business Cloud Accounting

Accounting is packed full of time saving features for you and your business. Talk to your accountant about which features your business requires.
